# Sol Call

Noise firewall for call centers

Looking to improve user experience, prevent leakage of private data or improve the accuracy of voice analytic? Let the experts help you. SoliCall is a market leader in call quality and we filter 15 million calls per day.

The Noise firewall automatically correlates the audio from all agents in order to identify the source of the noise and remove it from the calls.

Improve customer experience. Shield your customers from ambient noise in your call center such as other agents talking in the background.

Protect private and sensitive data from being overheard by your customers which corresponds with regulations such as PCI and HIPAA.

Increase the accuracy of voice analytic engines like speech-to-text and emotion detection.

Increase productivity and reduce average handle time by minimizing the need for repetitions.

Bidirectional improvement of audio quality. Solve quality issues that impact the efficiency of the calls.

Contact us to discuss your requirements and we will be happy to share our experience, best practice and relevant case studies.
